DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-39 are rejected under 35 U.S.C. 102(e) as being anticipated by Bossard et al (5,949,793).

Regarding claims 1-2, 12, 15, 21-22, 31, 34, Bossard et al. disclose a transmission of digital and analog signals in the same band comprising a number of communication circuits disposed to divide a region in to communication areas (see fig.4, elements 410, 413 and its description); wherein each communication circuit communicates using a first polarization in a first portion of its communication area and communicates using a second, different polarization in a second portion of its communication area (see fig.4 elements 410, AV, DH AH, DV and its description); wherein adjacent portions of communication areas of different communication circuits use the same polarization (see fig.4, element 410, 413, 420, 423, col.7, lines 35-39 and its description).

Regarding claims 3-4, 13-14, 23-24, 32-33, Bossard et al. further disclose the first polarization comprises horizontal and the second is vertical horizontal (see fig.4, cell 410 and its description).

Regarding claims 5, 25, Bossard et al. further disclose the first and second portion of each communication area, comprises approximately one half of the communication area (see fig.4, elements 410, 413 and its description).

Regarding claims 6-7, 16, 26, 35, Bossard et al. further disclose a numbers of sectors within each communication area, each sector communicating on a subband of a frequency spectrum (see fig.4, and abstract).

Regarding claims 8-11, 17-20, 27-30, 36-39, Bossard et al. further disclose the first and second portions of communication area are divided along the number of boundaries of the sectors and each communication circuit transmits signal using a first and second polarization (see fig.4 and its description).
